**PRIMARY EXAMINER**

This action is in response to the applicant's response filed on 8/1/03.

***Claim Rejections - 35 USC § 102***

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Claims 14-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Takhashi et al (US 6,306,211).

Takahashi et al clearly teach producing SiC layer with nitrogen impurity concentration gradient  $2.3 \times 10^{17} / \text{cm}^3 / \text{nm} = 10^7 \text{ cm}^{-4}$  equal to  $2.3 \times 10^{24} \text{ cm}^{-4}$  or with minimum concentration gradient of  $1.7 \times 10^{23} \text{ cm}^{-4}$ . (see col. 9, lines 9-60 and fig. 2 and fig.4 ).

***Conclusion***

Applicant's arguments with respect to claims 14-16 have been considered but are moot in view of the new ground(s) of rejection.
